

React Native Developer Practical Task

1. Setup the react native project named MyTestAp.
2. Use development approach either react-native-cli or expo as per your ease
3. Setup splash screen with the logo.
4. Setup bottom navigation with three button named Home, Listing, Settings
5. Upon clicking of that button each separate screen should be opened
6. Application should have a header navigation bar in which the user can change color theme either light or dark.
7. In all those screens show the following content.
8. In Home Show your device details
eg. OS, Device ID etc. Make sure to ask permission first.
9. Add Button named photos upon clicking that your phone's gallery should be opened.
10. In the Listing should be a list of dummy data. You can take dummy data from faker library
11. In the Settings screen just show below form fields.
 - Name
 - Email Address
 - Birthdate Picker
 - Country Selector

Submission Instructions:

Complete the practical task, create a public GitHub repository, push your code, and **share the repository link via email.**

Good luck! We look forward to your submission!

NOTE: If you don't submit your trial task in the next 7 days, we will assume you are not interested in this role anymore and consider this trial as failed.
